

14 - 15 March 2023 **9:00 am - 5:00 pm** **Course Fee: BDT 8,000**

SHORT COURSE ON **MIXED METHOD RESEARCH**

ABOUT THE COURSE

Research in international health is becoming increasingly complex, requiring scientists and policy makers alike to move away from the traditional quantitative vs. qualitative methodological dichotomy. This traditional dichotomy has in fact proved no longer to be the most effective in providing answers to the complex problems emerging in today public health both in the North and in the South of the world. Mixed methods research represents an opportunity to build on the specific strengths of quantitative and qualitative research methods to build synergies between the two which may allow for a comprehensive understanding of the problems at stake.

Our course aims to train participants in understanding the concept of mixed method, formulating mixed method question and identifying the correct mixed method design.

This is meant to be an advanced course, building on the basic prior knowledge of research methods acquired during the core course or through other previous experience.

DURING THE COURSE YOU WILL LEARN

- The tradition of research: understanding the philosophical approaches behind the work we do (positivism, post-positivism, social constructivism, pragmatism)
- Formulation of mixed method research questions
- Review of current approaches to mixed methods research

WHO CAN APPLY FOR THIS COURSE?

The course is designed for mid-level aspiring researchers and development practitioners working in public sector institutes, NGOs, academia, research institutions and other civil society organisations who have experience in qualitative and/or quantitative method projects.

COURSE INSTRUCTOR

Dr Malabika Sarker is a Professor at Brown University School of Public Health, Brown University, USA.
